ABSTRACT

1
2 A piggyback carrier designed for the safe and
3 economical transporting of a container piggybacked to the
4 back or front of a vehicle. Specifically, the piggyback is
5 designed to be attached to the container and to support the
6 container during transportation. The piggyback carrier can
7 be adjusted and may be fitted to most vehicles having
8 conventional type hitches. A left and a right jack is
9 removably attached to each side of the frame of the carrier
10 to enable one man to jack up a heavy cargo, roll it to the
11 vehicle and mount the frame to the hitch on the vehicle.
